PROFILE

An experienced, resourceful individual who is highly motivated, conscientious and reliable, accustomed to meeting targets within time, cost and exacting standards in a wide variety of roles. My experience, training and education within computer science, IT, mathematics and teaching show my ability to learn quickly to a high standard over a broad range of technologies.

After years of experience in mainframe operations and more, and with nearly two years at Spearline, having been promoted twice, I have learnt a lot and am always ready to learn more.

I am focused on gaining a holistic understanding of a company's business, thinking deeply about how business needs can best be served by software systems, developing internal tools to automate repetitive procedures, being proactive in anticipating future needs and spotting issues early, constantly liaising with others within and without the dev and software teams, using the information available to best advantage, encouraging the sharing of knowledge, writing clear documentation when appropriate, encouraging and mentoring junior team members.

KEY SKILLS

- Adaptable and flexible - ability to cope with changing priorities and different working environments.
- Always looking at the bigger picture, while also able to focus on detail.
- Reliable, conscientious, with a cheerful disposition.
- Meticulous, able to persevere with a problem to its conclusion.
- Multi-lingual speaker of Italian, German, some French and Spanish.
- Keen, enthusiastic and competent team player.
- Excellent written English, experienced at writing high-quality documentation.
- Commercially aware.

TECHNICAL SKILLS

- Languages: Python / Javascript (ES6) / Java / Clojure / PHP / VB.NET / Bash / HTML / CSS / GLSL / Beginner Rust!
- Database: Postgres / MySQL / MongoDB
