THE LYONIAN

THE MAGAZINE OF THE LOWER SCHOOL OF

JOHN LYON
HARROW

SIT ET FORTVNA DOMVS

School Notables.

School Captain: J. C. O. HURST.

Monitors: J. B. M. SWAN, A. C. B. GRIMES, H. A. TAYLOR.

Pro-Monitors: P. J. MARKHAM, E. C. BARWICK. J. V. MITCHELL, A. H. GROUT.

House Captains:

North: D. W. COOMBES. East: J. V. MITCHELL.
South: J. C. O. HURST. West: J. B. M. SWAN.

Football Captain: J. B. M. SWAN.

Vice-Captain: J. C. O. HURST.

1st. XI. Colours:

J. SWAN, J. C. O. HURST, R. HOCKING, A. C. B. GRIMES, E. CORNS, A. WILLIES.

Cricket Captain: J. B. M. SWAN.

Vice-Captain: G. WOODBRIDGE.

Cricket. 1st XI. Colours:

J. SWAN, G. WOODBRIDGE, J. C. O. HURST, A. C. B. GRIMES, D. GOLDHAWK, L. GILLETT, D. COOMBES, R. HOCKING, G. DAVIES.

Cadet Corps: C.S.-M. J. V. MITCHELL.

Magazine Editor: D. A. COWTAN, ESQ.

Assistant Editor: A. A. MOPPETT.

Librarian: P. J. MARKHAM.

Boxing Club Hon. Sec.: J. C. O. HURST.

Boxing Colours:

J. C. O. HURST, C. W. F. HUNT, T. FINCH, N. BARDER, K. G. BOLTON, R. H. HILLS, W. BREWIN, J. HAMILTON, N. HENSON, K. TAGGART.

Senior Athletic Champion: J. C. O. HURST.

Junior Athletic Champion: D. W. BROOKS.

Senior Swimming Champion: E. C. BARWICK.

Junior Swimming Champion: F. BARNARD.

Vol. XXXVIII.] [No. 273.

School Notes.

Term ends on July 23rd, and School re-opens September 12th.

* * * *

Credit marks have been gained by C. Knight, J. D. Hoadley, D. Goldhawk, G. Davies, A. Taylor, F. Fish.

* * * *

Although we are unable to publish a report of Speech Day proceedings, that occasion will be a thing of the past when "The Lyonian" appears. July 20th is the date.

* * * *

Colin Rose (Walter Leaf Scholar, 1925-28) has passed the final examination for the degree of B.Sc. (London) with first class honours, in Geology.

* * * *

The Senior Literary and Debating Society is hoping to hold its first meeting for the reading of a play shortly.

Somehow or other this crowded term has gone on swimmingly enough. All the important social events of the School year take place in the Summer Term. Sports Day, Swimming Sports, Speech Day, and yet we have found time for other things—visits for example. And in spite of the rush of events we think that, unimpeded by epidemics as we were last term, school work has proceeded satisfactorily.

* * * *

The weather has been very fine. It has made the initial destruction necessary for laying the foundations for the new building rather poignant. The gay vegetation is trampled; trees are being felled relentlessly. Probably with some secret symbolistic intent, the red may-tree blossomed late this year.

* * * *

The fine weather having thus drawn our attention more strongly than usual to the little plot that must disappear, we find consolation by reflecting that perhaps the new building will absorb mystically some grace from the old face of its site :—

" And beauty born of *fluttering flowers*
Shall pass into *its* face."

* * * *

Talking of flowers, we have to record the formation of a Wild Flower Club in Form I. We understand that the constitution of the Club is elaborate. One member has already carried off a first prize at a local Flower Show.

* * * *

The cricket teams have had a very good season, and deserve our congratulations.

* * * *

P. H. Cresswell, W. Bowron, H. Purchase, and L. McDonald have passed the Senior Examination of the London Chamber of Commerce. Cresswell gained distinctions in Mathematics. K. Henson has passed in Senior English.

* * * *

Edward Brown, who matriculated at Christmas, 1925, has passed the Intermediate examination of the Institute of Chartered Accountants, obtaining 9th place out of 632 acndidates.

Norman H. Bowden, M.C., of Strathcona's Horse, was married on March 18th, to Miss Violet Nichols, at Kamloops, British Columbia. Many Old Boys will remember Norman and join with us in wishing him and Mrs. Bowden a long and happy married life.

* * * *

Gordon Sunderland has been appointed Accountant to the Manufacturing Confectioners' Alliance.

"The Lyonian."

Contributions to the magazine this term have been disappointing in some respects; *on the whole* they are only a little better and more varied than last time; and hardly at all more numerous. It is to be hoped that we are not coming to a standstill. As some contributors will see, old contributions are not consigned immediately to oblivion, and one purpose served by the retention of past efforts is that comparisons can be made which are not always favourable. The disappointment referred to above arises *not* from the quantity or quality of articles published, but from the unpublished material, for it is this which determines the standard of the magazine as a whole. What we want every term is a stack of rejected material of good standard!—Next term magazine representatives will draw up a terminal report for each Form, indicating what has been done by themselves, and the response met with in their respective Forms.

We have been disappointed in a number of promised articles on music, for this issue. We therefore throw out a few suggestions. From the " Whizz-bang " concerts one would conclude that there is considerable knowledge of jazz, at least, in the school. What an opportunity! Yet no article is forthcoming. Could not someone write for us on the original negro associations of jazz and on its more recent assimilation of a Jewish element? Could not someone, on similar genealogical lines, tell us something about " blues "?—Or, again, the orchestration and performance of jazz could be discussed.

A consideration of some of the themes suggested would lead the inquirer, if competent, into interesting realms of discovery. He would find connections between the harmony of negro spirituals and " Hymns Ancient and

Modern." Nor would his net be innocent of big fish; he would find himself on the track of the melancholy of Delius; a consideration of fox-trots and "blues" would lead to Ravel's "L'enfant et les sortilèges" and the second movement of his violin sonata. An investigation into the history of syncopation, similarly, would give interesting results, culled from recent and earlier musical history.

And the polemics of some sections of the school could be found a channel for its vigour; let the controversialists lend verbal aid to the musicians, who would no doubt find themselves divided on the question of the future of jazz.

J. Spon, Form IV., sends us a review of "The Oxford Book of Regency Verse" (Clarendon Press, 8/6). He is to be congratulated on this piece of pioneer work, though we have not printed the article. We think the writer was over-severe.

A summary of the views expressed (for which we take no responsibility) comes to this: the book as it is at present was unnecessary, unequal, uncritical, inaccurately chosen (in view of the title), unrepresentative of the authors included (Leigh Hunt, Lockhart and Macaulay are instanced) and ill-planned, ill-conceived.

Perhaps some member of the Fourth Form intelligentsia will glance at the volume, take a kindlier view, and send an article for next term's magazine.

Livy.

Titus Livius was born at Patavium (Padua) in 59 or 58 B.C., probably of a noble and wealthy family, and on coming to Rome was admitted to the court of Augustus. He never flattered the emperor, but avowed his preference for a republic. He praised Brutus and Cassius, sympathized with Pompey, and stigmatized Cicero, an accessory to the murder of Cæsar, as having got from Antony's bravoes only his deserts. Of the great Cæsar himself he doubted whether he was more of a curse or a blessing to the commonwealth. Such friendship as existed between Livy and Augustus never diminished. Livy died at his native Patavium about A.D. 17.

His history of Rome from her foundation to the death of Drusus comprised 142 books of which those from the 11th to the 20th, and from the 46th to the 142nd, have been lost. Of the thirty-five that remain the 41st and 43rd are very imperfect. The summaries of the contents of each book,

composed in the period of the wane of Roman literature, to catalogue names and events for rhetorical purposes, have all, however, come down to us, except those of Books 136 and 137. But what has been spared is more than enough to confirm in modern days the judgment of antiquity, which places Livy in the forefront of Latin authors.

His impartiality is not less a part of his work than his veneration for the good, the generous, the heroic in man. For investigation of facts he did not go far abroad. Accepting history as a fine art rather than as a science, he was content to take his authorities as he found them, and where they differed was guided by taste or predilection. Gronovius Drachenborch, Ruddiman, Madvig and Zingerle have purified Livy's text and illustrated his meaning.

Meritorious versions of his history have been Englished, and Philemon Holland translated the whole in fine Elizabethan English.

G. S. Maisey, Form IV.

A Visit to the London General Omnibus Co.'s Works at Chiswick.

On Friday, June 7th, the Fifth Form, under the guidance of Mr. Thomas, paid a visit to the works of the L.G.O.C. at Chiswick.

The visit was favoured by good weather, and it was therefore enjoyed to the full. On arrival two smaller parties were formed, and thus the tour of the factory began. The first object of interest was the skidding track, which caused considerable amusement. The guide then proceeded to the engineering shops, the first being where the buses are completely taken down to be overhauled, a process carried out once a year on every bus. Adjoining this were many other shops, in which the various parts were thoroughly cleaned and reassembled.

Proceeding from this part of the factory the guide next entered the body-building section, where one could see how the wood is cut and treated until it takes its place in the familiar coachwork of a bus.

The next department was where the bodies were being painted in readiness for the road. Before this is done, however, the completed bus undergoes a number of tests, carried out on specially constructed roads in the Company's grounds. With this the visit concluded, except for a short examination of models in the museum.

D. P. G.

Notes on Local Bird-Life.

I find that the people of Harrow, save, perhaps, certain inhabitants of Whitmore Road, take little interest in the abundance of bird-life which exists around them. It is, however, impossible in so short a space to remedy this unfortunate state of affairs, and attempt to stimulate a widespread interest in the absorbing pastime of bird study, by a detailed description of the habits and variety of Harrow birds. So I intend to mention just the localities of the common residents, with a word to their distribution and to name some prominent winter and summer visitors. By this means I hope that those who wish to enrich their knowledge of nature by observing the birds may know where to look and what to expect to see.

Let me mention the birds as I think of them, without keeping to any sequence of families.

The jackdaw, a scarce bird in many districts, is a resident commonly found in Harrow. Near where flows the full tide of Harrow's ever-increasing traffic, the jackdaw dwells secure. From the roofs of a row of old houses in College Road, by the Met. Station, his cheerful "jarrck" may be heard. At least two chimneys contain a nest. These birds also build in the chimneys of the Vaughan Library, and probably in other chimneys on Harrow Hill.

Sparrows, chaffinches, starlings, blackbirds, thrushes, wrens, robins and hedge-sparrows are as common in Harrow as everywhere else. The number of starlings is greatly increasing year by year. This is perhaps a pity, since in their eager scramble for nesting-holes, they frequently turn out such birds as great-tits, blue-tits and swifts. The sparrows, too, in my neighbourhood at least, are increasing too fast. They eat the peas, the grass-seed, and the corn in the hen-runs. A pair this year have taken possession of a martin's nest, in which the martins had successfully reared their broods for two consecutive years.

The swallow is less common in Harrow than it used to be, on account of the amazing increase of houses about the farms where it used to nest. However, there are still plenty at Moat Farm, and a pair have built in a small barn by Bessborough Road. The barn owl, another inhabitant of barns, has, I believe, entirely disappeared, though it was formerly to be found near Moat Farm. The tawny owl also nested in

that district but does not seem to exist there now. The kestrel, however, is fairly common, and may be seen on Harrow Hill, where it may have a nest.

But Harrow has lost and is losing several rare birds owing to the increase of roads and houses. Especially is this the case with summer visitors, such as the warblers. The garden warbler, willow warbler and black cap used to nest, though sparingly, in copses near Moat Farm, but I have not seen them for several years. The nightingale once nested there too. Two other warblers, the common and lesser whitethroats, are also disappearing.

The linnet is a local resident. Three nests were found last year in the fields near North Harrow. The greenfinch is more generally distributed. In winter its numbers increase, and it may be seen in small flocks or pairs in any garden where hips are to be found, or where someone has put out a dried top of a sunflower, to the seeds of which the greenfinch is particularly partial. Goldfinches are common winter visitors to any piece of waste ground where thistles grow. Reed buntings visit marshy ground in the winter; they formerly nested, together with reed warblers, in the neighbourhood of North Harrow. The bullfinch is another winter bird which used to breed in the district.

Harrow is especially favoured with interesting birds in the winter including such northerners as the stonechat and the meadow pippit. The Scandinavian fieldfares and redwings, corresponding to our thrushes and blackbirds, which spend the winter in England, occur plentifully in Harrow. The redwings come to the gardens, but the fieldfares prefer the open country, where they fly noisily from tree to tree, and are hard to approach.

But by far the most prominent winter birds are the seagulls. These are chiefly black-headed and herring gulls. Screaming swarms will alight for fat or bread if it is placed in a large garden, but unless thus attracted they spend most of their time foraging in fields with rooks and crows.

Other winter visitors are the kingfisher, the tree-creeper and the yellowhammer.

Among such birds, and, indeed, many more, lives the population of Harrow. Yet the fields do not teem with eager ornithologists, few nesting-boxes or bird tables are seen in the gardens, no vast sum of money has been spent on a bird sanctuary . . . . It is very strange.

M.

Bessarabia.

One of the many danger-points of the world, where two powers are on the verge of war, and defection in the camp of one invites attack by the other, is Bessarabia. This is a province of Roumania, on the shores of the Black Sea, enclosed by the rivers Pruth and Dniester. To the east of it, across the latter river, is the territory of the Union of Socialist Soviet Republics. Between the U.S.S.R. and Roumania there is great enmity over Bessarabia, an enmity of twelve years' standing, that is a menace to the peace of Europe. Even now the province is under military rule and is in a state of siege.

In the past, Bessarabia has been a source of rivalry between the Moldaves (Roumans) and the Turks on the one hand, and the Russians on the other. The Russians held it for over a century from 1812, and found in the Moldaves of Bessarabia a vehemently nationalist people who hated their rule. When the Revolution came, in 1917, these Moldaves proclaimed the independence of Bessarabia, and, much against the will of the large Russian population, invited Roumanian troops to protect them.

For the first three months of 1918 a state of war existed between the Roumanians in occupation and the Ukrainians across the Dniester, which was concluded by an agreement for the withdrawal of the former.

This was not carried out, strife continued between Moldaves and Russians, and at last, amid a storm of protest from the latter and the Moscow Government, the Great Powers sanctioned the union of Bessarabia with Roumania (October, 1920).

Since then the Soviet has kept up a barrage of revolutionary agitation against Roumanian power in Bessarabia. In 1924 the large Moldavian community east of the Dniester was organised into a Socialist Soviet Republic, to spread Communist propaganda among the kindred Moldaves across the river. The Roumanian system of equal division of land among the peasants has made the Bessarabians dissatisfied with the small holdings they thus get, and the propaganda has born fruit among them.

Roumania, a weaker military power than the U.S.S.R., concluded in 1926 a treaty with Poland, by which it was agreed to mutually defend their eastern frontiers. Roumanian soldiers and soldiers of the Red Army now patrol

the opposite banks of the Dniester : a shot exchanged between two sentries might, under present conditions, develop into an international conflict with disastrous consequences.

B. L. Pearce, Form IV.

Summer Afternoon in Class

(in the manner of Skelton).

" How good ! " we say
At the end of the day,
When we've finished our toils,
And the class-room boils.
Our master is weary,
And we're not cheery.
But now the bell's gone,
Our caps we'll don.

N. Debenham, Form II.

C. Knight, Form I., assures us that methods of multiplication in Tibet are somewhat confusing. In accrediting the Tibetans with the following device, however, we suspect that he is being facetious.

Task : to multiply 245 by 61.

European method :

```
  245
   61
 ----
  245
 1470
 ----
14945
```

Tibetan method :

```
2)245      61
 )122     122
 ) 61     244
 ) 30     488
 ) 15     976
 )  7    1952
 )  3    3904
 )  1    7808
```

The answer is then arrived at (at least, Knight assures us that it is : we have not tried) by scratching out all numbers on the right hand column facing even numbers on the left, and then adding together the surviving numbers on the right.

Knight also enumerated other points of technique which we leave readers of " The Lyonian " to discover for themselves.

A Short Stay in Belgium.

One fine summer morning we set out for a holiday on the Continent. We were to stay for a few days in Belgium and then to proceed through that country into Germany. The fast boat-train took us at high speed from Victoria Station to Dover. If you are lucky, when you go to Dover the train takes you through Folkestone and right along the coast under the cliffs, known as the Warren. Here from time to time you can look out on to the sea and can decide whether your stomach will stand the state of the Channel. It is interesting to note that in this Warren are still to be seen the workings of the Channel Tunnel, now destitute.

Thence the train took us along one of the stone quays at Dover Harbour, and came to a halt opposite the ship which was to take us to Ostende. The ships on this route are supplied by the Belgian Government and are quite large. When everybody was aboard, with a dull hoot the "Princess Elizabeth" drew out of the harbour to the rolling of the rougher water outside; then with bow pointed eastward and the engines at full speed she started to plough her way, on the four-hour voyage to Ostende. Having got thoroughly accustomed to the sea's movement, we walked about and went all round the ship. Notices appeared everywhere in English and French but the Belgian stewards betrayed their nationality by their accent. Reading and walking about the ship occupied the whole journey, and at last we saw the flat, sandy, Belgian coast; at length approaching so near that the names of the hotels could be seen. A narrow river-mouth presented itself and having completely turned round we backed down the Yser to the Quai Maritime, passing the historic sunken hulk of the "Vindictive." After a scramble through Customs we found ourselves in the hotel which adjoins the station. A good tea revived us, and we went for a walk along the front, past the fishing quays. We noticed many interesting things. All notices and street names, in fact all printed matter, is in French, with the Flemish underneath. We heard some bargees speaking Flemish, and it sounded like a man speaking with something large in his mouth, and falls harshly on the ear, as Dutch does. Long trains of single decked trams clang along everywhere. We walked on past the Kursaal and the royal summer palace, and returned by tram. A fine dinner awaited us at the hotel and my gallant attempts to prove worthy of Mr. Thomas's teaching merely brought a smile to the dapper waiter's face and henceforth he spoke to us in delightful English.

Again we went out through the town. Everywhere there was life; the fishing-fleet was departing, and here and there in an inn a party of dancers with a concertina player made merry. Everywhere were the pretty, laughing faces of the Belgian girls as they danced to some popular dance-tune long since out of vogue in England. At regular intervals the light-house flashed its beam over the horizon, bathing in white light the beautiful twin towers of l'Eglise de SS. Pierre et Paul.

The next day we spent wandering about the port and testing my knowledge of French on each sign or notice we saw. I saw for myself all the notices and phrases that Mr. Thomas had so often told us in class. That night we retired early and arose the next morning to catch the international express which connects with the night boat from Dover. Then for about eight hours we travelled through the heart of Belgium and from our comfortable seats scanned the changing countryside. Flat plains gave place to verdant hills and the winding line threaded in and out the hills of industrial Belgium—Bruges, Ghent, Brussels, Louvain, Landen, Liège, Verviers, Ronheidt (the actual frontier), to Aix-lu-Chapelle, and then we were in German territory. We had completely spanned the little country, which only ten years ago was war-scarred, the scene of terrible bloodshed and desolation, so well named "the Cock-pit of Europe."

A.H.G.

The New Skanderbeg.

ALBANIA'S EXPERIMENT IN MONARCHY.

Many people imagine, and their imaginings are quite permissible, that Monarchy is gradually dying a natural death in Europe. But this is not the case. Take, for instance, Albania. For years this country, which has been the bone of contention among the neighbouring nations ever since the fall of the Roman Empire, has been without its own ruler. Yet, only last year, Ahmed Bey Zogu, who for several years had ruled in the capacity of President,

was declared King, with the honoured name of Skanderbeg III. His reason for accepting the title was that he could give to the " country of the eagle " a permanent head.

But in Albania, whether you be King, President, or peasant, your life is apt to be a very transient affair. There is a custom known as " blood-vengeance " in which families of the contending parties gradually exterminate each other. Also the idea is current that an argument can only be settled by gun-shot. The King himself is not immune from this idea. Even when in the National Assembly his life is still unsafe. Whenever King Skanderbeg presents himself in that place, a big revolver ostentatiously protrudes from his breast-pocket. It must certainly create an uncomfortable impression in the mind of a foreign diplomat when he observes His Sacred Majesty covering the leader of the Opposition with a pistol !

In 1913, after the emancipation of Albania from Turkish domination, Prince Wilhelm of Wied, a German princeling, was given the uneasy task of governing this turbulent land. After a few distracted months, following the declaration of war by Austria on Serbia, his reign came to a sudden end. Wilhelm decided it would be wiser to change his vicinity, so with his wife and infant son he " dug himself in " in the marshy harbour of Durazzo, where, with barbed wire, and a battery of artillery, he proceeded to indulge in a little war on his own with Essad Pasha (uncle to the present king), his former Minister for War. From the other side of the road at Durazzo the Pasha bombarded the palace, which replied in a similar fashion.

Once, indeed, the erstwhile Mpret issued forth from his sanctuary to attempt to gain over to his side some of the prominent tribesmen. But after he had gone some miles they began to shoot, so the valiant Mpret turned his horse round and never stopped until he had reached his stronghold.

With the defeat of Germany, Wilhelm's hopes came to an end, and he left the country. In 1920 all the rival Albanian factions met and a Government was appointed with Ahmed Zogu as Minister of the Interior. In 1924 the Nationalist Party, with the Bishop Fan Noli at its head, attacked Tirana (the capital) and Ahmed Zogu had to flee for his life. Back again in six months, he was made President, and to-day is King.

J. S. Spon, Form IV.

Heroes of the Mine.

On a Wednesday evening, the 12th of April, 1877, the men in the Tynewydd Colliery, in South Wales, were just about to leave work for the day, when a terrible roar was heard, as of some fearful explosion followed by the sound of rushing water. Water had burst into the mine and flooded the greater part of it, so that a number of the miners could not escape.

As soon as the accident became known, efforts were made to release the captives. The noise of men at work guided the relief party to the part of the mine in which their fellow-workmen were confined. A body of men stripped themselves to the waist and began to cut a passage through the solid mass. Their efforts were successful, and four men were taken out alive.

It was now discovered that more men were missing, and efforts were made to reach them. Directed by knockings which could be heard from time to time, the place of their imprisonment was found. But it was no easy task to reach them. Thirty-five yards of solid rock and coal must be cut through. Day after day the almost superhuman labour went on. The men worked as they had never worked before ; blood streamed from their hands, but still, with an iron will, they bent themselves to the work of rescue.

On Thursday evening, nine days after the accident, the drill passed through the rock, reaching the men at a distance of eight feet. So strong a blast of wind burst through the hole that the brave workers had to crouch down in the passage, and for some time no voice on either side was heard. Not even food could be passed through, and so the workers had to try to break down the barrier which still kept their fellows captive.

Again and again were they forced to retreat by a rush of gas which put out the lamps, and threatened to suffocate them, and at last they began to waver. To go on was almost certain death, for it was to brave both fire and water. But eight brave men advanced to their task, and commenced to hew down the coal. In a few hours a hole was made, and then the compressed air escaped in fearful gusts, and with such terrific noises that the stoutest heart was awed.

At one o'clock the barrier was knocked down, and a rush was made to the imprisoned men. The first to be brought out was a lad in the arms of one of the brave rescuers. Two of the men were able to crawl out, but the remaining two had to be carried.

G. K. Bolton, Form III.

St. Albans.

In the middle of the town is situated what was originally the Roman Circus, where chariot races used to take place. It once sloped up on either side, but with street improvements it has been levelled out. Going away from the circus we pass the Clock Tower, built during the 15th century, and come to the wax-house, where the candles were made for the Abbey. Passing under this we get our first good view of the Norman Tower, which is 144 feet in height and built of Roman bricks taken from the ruins of Verulamium. The tower, which was built in 1077, has never been touched since, although other parts of the building have recently been restored by Lord Grimthorpe at a cost of £160,000. Proceeding, we come to the place where the burial ground and chapter-house are supposed to have been. Part of the cathedral wall is formed by the ancient cloisters, which are wonderfully preserved. Farther along is the place where the abbot's house used to butt on to the cathedral. There are remaining numerous marks of its existence, such as the plastered condition of the wall. A little farther along may be seen the great gateway of the monastery, built about 1361 and now the only part remaining. During the peasants' revolt of 1381 it was used as a prison for some of the rebels, who used to let down boots from the gateway in order to obtain food from the townspeople. Now, however, it forms part of the St. Albans Grammar School, which has been in existence since the 11th century. The western door of the cathedral is a very fine piece of architecture, recently erected by Lord Grimthorpe in his restoration work. Inside the doorway may be seen figures of St. Matthew, St. Mark, St. Luke and a figure of Lord Grimthorpe himself, placed there at his own request so people say. The cathedral itself is situated 320 feet above sea-level and on higher ground than any other cathedral in England. It is also next in length to the longest cathedral in the world, being 550 feet long, Winchester Cathedral is six feet longer. The nave is claimed to be the longest in the world. As we enter it we are struck by the different forms of architecture which are joined on to each other. There are fine examples of the Early English, Norman and Decorated styles, the latter recently erected by Lord Grimthorpe. The early English architecture contains the wonderful dog-tooth mouldings. Looking back towards the door, we see an elaborately decorated stoup and a few pillars containing bases for smaller pillars around them. Lower down on the left we see

the Early English section with the beautifuuly painted walls. The right hand side of the nave, however, has been replaced by Decorated work, as the original wall fell out. One of the Norman pillars is decorated with a beautiful fresco. At the back of the altar is a beautifully decorated screen, but a great part of it was smashed during the Reformation. On either side of this are two ornate doors, neither of which have been despoiled. Passing from here into the north transept we see the stone coffin in which the two hermit monks, Roger and Segar, were buried. Here is also situated a beautiful Transitional Norman doorway through which the abbot was able to pass on his way to the cloisters. Entering the south transept we behold a number of Norman and Saxon columns above our heads; on the opposite side are some plainer ones. Here are situated the five sisters, the centre one, which is the tallest lancet window in England, being 60 feet in height. In a small recess are situated three small Elizabethan cupboards in which loaves are placed on a Sunday for the poor townspeople. In a similar recess opposite there is a fine effigy of a knight showing all his different sets of armour.

From here we get a good inside view of the tower, which contains the tenor bell weighing 1½ tons. The ceiling is 102 feet high, and the arches 55 feet, and there are panels with beautiful paintings of the roses of York and Lancaster. The ceiling is beautifully painted. It was only discovered by accident when some men were white-washing it. It dates from 1368, but is not wholly of that time. It has been seen by examination that the sixth row of panels dates from a later period. Here is situated the beautifully carved bishop's throne and choir stalls.

In the north transept is a great wheel window, containing smaller windows representing 5s., 2s. 6d., 2s., 4s., 6d. and 3d. pieces. Below this is a fine Norman door with two windows up above. Here are a beautiful effigy of the first Bishop of St. Albans, 1872, Bishop Clavighton, and the old parts of the west door.

From here we pass into a small building where all the pieces of stone which were not wanted were placed. Here one may study various styles of architecture. This was also used by the monks on their way to the burial ground. Passing out of here we see the tomb of Wheathampstead, which is covered with a piece of the finest brass in England. The tomb is guarded by an iron grill, which looks as though it has recently been placed there, although it was placed there

at the same time as the tomb, 1270. Near this we see the beautiful shrine of St. Alban, which was restored from countless small pieces after its discovery inside the wall. It has holes through which pilgrims were able to place things which they wanted blessed and a number of small recesses in which offerings were placed. The shrine was guarded by a monk sitting in the watching gallery night and day. Over the shrine was placed a large canopy, which was only removed when anyone wished to get at the coffin. In the floor through a trapdoor is situated the tomb of Humphrey, Duke of Gloucester, brother to Henry V. Near here is the shrine of St. Amphebalus and the watching-tower, both after the style of St. Alban's shrine.

From here we pass into the Lady Chapel, which contains examples of Early English architecture dating from 1260 and 1320, and decorated architecture. Here are buried a number of well-known men of Edward VI.'s time, such as Northumberland and Somerset. For a long time it was used as a Grammar School and all the lower parts were completely destroyed. It has been restored, however, and is no longer a school.

Near here is that marvellous piece of carving, the Wallingford Screen. It was first done in 1484, but was despoiled at the Reformation and has recently been restored at a cost of £12,000. This finishes our tour of the cathedral, and we pass out down the pathway used by the monks, from the fish-pond to the abbey. On our way to the fish-pond we pass the " Fighting Cocks " Inn, which claims to be the oldest inhabited house in England.

From the fishpool, which is fed by the River Ver, we pass on to the British causeway. This part of St. Albans, I think, needs a little explanation before we can understand what the place is and why it is so famous.

About 2000 B.C. the site of Verulamium was used as an ecclesiastical centre. In 1000 B.C., in the Iron Age, it was inhabited by Belgic tribes who had invaded the country. A stronghold was now established here of 200 acres for use in time of war. On three sides of the stronghold deep fosses were dug, while in one exceptionally weak place a double one was dug. The earth from the fosse was thrown up on the inside so as to form an extremely high wall all round. The fourth side, however, was protected by a marsh and a great dam was thrown up to keep back the water of the Ver to form a great lake. Thus it seems to be even older than

Stonehenge. In peacetime the people lived scattered, but in wartime they drove their cattle along the fosses to the stronghold, which was additionally protected by a strong wooden palisade. In 54 B.C., the year of Cæsar's second " visit," he marched on Verulamium and defeated the Britons. Peace was concluded on September 10th, 54 B.C. A mint was now established at Verulam. A number of coins have been found here indicating this. There was peace here for 100 years. In A.D. 43 the Romans came to stay in England, and 15 years later, in A.D. 58, Verulam was made a municipium by Nero. This is the first Roman town and municipium established in England, therefore as such Verulam is older even than London. The Romans built a great wall on top of the earth thrown out of the fosses and made loop-holes in them. Now any man born within the walls of Verulam became a freeman, while those born outside the wall of the town were the slaves of the Romans.

In A.D. 60, Boadicea, who had been badly treated by the Romans, rose up against them and captured Verulam. Suetonius Paulinus, the governor, hastening from Anglesey, collected 10,000 troops and defeated 230,000 Britons in A.D. 61. Boadicea, in order not to be captured, took poison. After this the Roman power was thoroughly established and Verulam was rebuilt on a grander scale.

In A.D. 303 or 4 the martyrdom of St. Alban took place at Verulam and the place first began to be named St. Albans. Bede, who was born in A.D. 673, a monk of Jarrow, gave a complete history of the country from 597—731. About 410 Rome withdrew her troops, but Verulam was still important and between 429 and 446 the Chapel of Germanus was built. After this the Picts and Scots came and then the Saxons and Danes, and in 793 Offa, King of Mercia, founded the monastery of St. Alban. In 948 the churches of St. Michael's, St. Stephen's and St. Peter's were built by Abbot Ulsinus. In 1077 the monastery was added to, and the dam which held back the lake was cut and the lake drained. Verulam was now in ruins and the stones from it were used to build the monastery.

Continuing our walk, we find a dip in the causeway where it was cut to let the water from the lake. Farther along we come to the great fosses and the Roman wall, which was at one time twelve feet thick, though now there is only a small part left. Some parts have been lost altogether. Walking along the wall we come to St. Michael's Church, already mentioned. Three-quarters of the church is of

Roman origin and has not been touched since 1220. The tower was of the 15th century, but it has recently been demolished and rebuilt by Lord Grimthorpe. It has been thought that this was the site of the Roman church of Verulam as there is a Roman pillar outside. The walls are extremely thick and in order to form the north and south aisles, three and four arches have been knocked out of the walls respectively. Thus instead of pillars there is the whole wall. Above this has been added a number of windows. In the chancel is a marble statue of Bacon, who was buried here by his own request. There is also an Elizabethan pulpit and hour-glass. Near St. Michael's church a beautiful Roman amphitheatre has been discovered with a fine pavement and painted walls covered with marble one inch thick. It has been covered up again, however, in order to preserve it, as the frost would get to it and soon destroy it. The last time it was opened was in 1869, during a visit of the British Association.

In 1847 the Roman barracks were discovered at St. Albans; in 1890 a Roman temple was found, and in 1899 the Roman forum came to light. This, I think, is very wonderful, and is worth a visit by anyone who is interested in archæology.

H. R. Blackburn.

The Fairy Piper.

The Piper, with his pipe right gay,
Came piping at the break of day,
Down the street towards the green,
Dressed in cloth of brightest sheen.

Men and women heard him play,
And children heard his piping gay;
The villagers, at break of morn,
Embraced him till his clothes were torn!

All day long the Piper played,
Till at last the dusky shade
Of night drew on; in the fading light
The moon rose on a merry sight!

But when the church-bells clanged eleven
He vanished as a star in heaven,
Soaring, shooting in mad flight,
Flashes from the gazer's sight.

J. Heady, Form II.

Television.

Television is a new branch of science, introduced to the scientific world by a Scotch experimenter, Mr. Baird. It is only in an experimental stage at the moment, but in a few years there will not be many homes without wireless both for "listening-in" and for television. There is no doubt—so rapid is the progress of science—that in a few years more one will be able to sit in an armchair and tour round the world with a television set, from the monstrous Woolworth building in New York to the sulphurous slopes of Yanek. We may even view the mysteries of Mecca, of which only three Christians have lived to tell the tale. We may penetrate up the Amazon and into the fastnesses of the Hindoo Kush—and all this without leaving our firesides. Television is the transmission of pictures of moving objects without the aid of photography. Television must not be confused with photo-telegraphy, although the process is connected with television, for the transmission of still pictures. The work of the televisor (the instrument which receives the picture) is to produce scenes something like a cinematograph but not on such a large screen. The mechanism of television is very easy to understand, for it operates on the same principle as the human eye. So that one may see a picture correctly in television, eight images per second must be sent, not photographs, but actual pictures of moving objects or human beings: the sending of photographs would be transmitting a cinematograph-film, or, as it is called, telecinematography. Obviously to broadcast a picture requires an "artificial eye," similar to the human optic, which can and must be very sensitive to light, and which will in some way or other alter an electric current when it is subject to various degrees of illumination. The selenium cell was the first really efficient "artificial eye." This substance is very sensitive to light. This is the kind of cell which was at first used by experimenters for broadcasting vision by wireless, but its place is gradually being taken by the photo-electric cells, which are much more sensitive than selenium cells. The photo-electric cell is extraordinarily sensitive to light, for it is capable of detecting candle-light two miles away and the light need only fall on it for one five-millionth part of a second to affect it. Before a scene can be broadcast it must first be produced as an image in a mirror, or a lens, or possibly a ground-glass plate. Finely drawn lines are then swept across the picture by means of revolving discs in which holes have been drilled. The picture reflects some of the light according as

it is bright or faint. This light is collected and passed through lenses on to a photo-electric cell, which at once generates tiny currents of electricity. These are amplified before being broadcast by passing through ordinary valve amplifiers. When the wireless waves from the television broadcast are picked up at the receiving end they are made to vary the amount of light given from a special kind of lamp, usually filled with neon gas. This lamp is placed behind a series of revolving discs similar to those used at the transmitting end. In this manner, flashes of light are projected through a lens on to the screen, and the original picture broadcast is reconstructed bit by bit—all within a fraction of a second. Of course the disc at the receiving end has to be synchronised with the one at the transmitting end, but except for this it will be an easy matter to tune in to "seeing-in," as it is to "listening-in." In America there are at least twelve radio stations which regularly attempt to broadcast pictures. The time available for the seeing of a televisioned picture is so short—only about one-tenth of a second—that the results of most television experiments are very imperfect. New methods of sending pictures in actual colours have been developed, but radio must be more selective before such improvements can have any claim to commercial consideration.

G. Nicholson, Form III.

Photography.

The camera in its simplest form is a box carrying at one end a sensitive plate of film, which receives the image, and at the other a lens for the purpose of focussing the required image on to the sensitive surface of the plate or film. The work of the box, or chamber of the camera, is to exclude all light from the plate. The lens is for the purpose of bringing reflections to an exact focus on the surface of the plate or film. Then we need a stop or diaphragm which fits on the lens; this is composed of thin tongues of metal or ebonite which are made to contract the aperture through which the lens guides the light rays to the sensitive plate or film.

The shutter is placed behind the diaphragm to give the exposure any desired length of time. In making an exposure, set the diaphragm at the required size and regulate the shutter to the right speed, and when the time is up

press the spring or ball, and the shutter will close. When taking the picture be sure to get the right focus. When taking portraits care should be taken to have a good background on which the figure will stand out well. The instruments needed for developing in a dark room are: one dark room lamp (ruby-coloured), four developing dishes, one glass measure, one packet of developing powders, a packet of hyposulphate of soda, commonly called "hypo," a pail for waste and a jug of cold water. The best way of printing is by sunlight, or by gaslight. Be careful to wash the prints before putting them up to dry.

L. Assiter, Form IV.

Paris.

Paris is a magnificent city, and is one of the cleanest I have seen.

There is one thing which I think strikes everybody who goes over there, and that is the width of the streets and boulevards.

It is a city of great historic interest, and has been the scene of many battles and sieges. Napoleon was buried in a magnificent tomb in the Hôtel des Invalides. The tomb is beneath the dome and is low down, so that one has to walk round a gallery and look down on it.

There are also several great soldiers of France buried there. The late Marshal Foch, who died on March 20th, was buried a few feet from the tomb of Napoleon.

The Arc de Triomphe is perhaps the most beautiful piece of architecture in Paris. Standing on top of it one gets a magnificent view of the numerous avenues which form a star round it. France's "unknown warrior" is buried beneath it.

The Eiffel Tower is another very striking feature of modern Paris, and the view from the top is extremely fine.

Also the Church of Sacre Cœur stands out well on the summit of the hill at Montmartre—the artists' quarter.

The City Cathedral of Notre Dame is an exquisite piece of work; the arches over the doorways being especially beautiful.

It is noted for the hideous gargoyles on the top, which the medieval peoples believed to be evil spirits.

The eight bridges over the Seine are also to be noted; and the Louvre, where art treasures from all over the world are collected.

R. V. Deeks, Form III.

The Royal Tournament, 1929.

On June 4th, a large party of boys, accompanied by Mr. Wilson and Mr. Ewbank, went to see the Royal Tournament at Olympia.

To my mind the best performed item on the programme was the Royal Naval Inter-Port Field Gun Competition. It proceeded as follows:—A three-foot obstacle had first of all to be crossed with the gun-carriage and limber joined together and going over as one. After rounding the turning-post a five-foot wall must be surmounted, but the gun need not be limbered up, and the gun and limber were taken over separately. A deep chasm had then to be crossed, the side of it being represented by wooden ramps. A second wall had to be negotiated as before, and the gun was taken into an "action" represented by the firing of three rounds. The gun and limber are then brought home over the chasm, but this time passing through holes in the walls, the three-foot obstacle having been removed. The run is completed when the gun and crews cross the finishing-line opposite the Royal Box.

Next followed a musical ride by a regiment of lancers. Anxious interest was aroused when one of the gallant company fainted, the idea being prevelant that he had been pierced by a lance. The other events hardly need describing. The chief ones were: A mounted display by the Equitation School, Weedon, a display of physical training by the Royal Air Force, a display by the Greenwich Orphan School for sailors' sons, and a "musical drive" by a battery of the Royal Horse Artillery, in their dashing Hussar uniforms.

One other event is certainly worthy of separate notice. It was the remarkable climbing feats by sailors. Ropes were suspended from the roof, and up these the sailors climbed, all in rhythmic movement. Various quaint antics were performed when the top was reached, and then—then, they actually came down by sliding upside down, down the ropes! It is doubly remarkable when one realises that most ships nowadays are steam-ships, with no ropes to speak of. The last event was the usual finale; that of showing all the dresses of a certain regiment from the time of its formation to the present day. This time it was done by the Middlesex Regiment.

J. S. Spon.

The Stonebreaker.

Tap! tap! tap! thud! "Ah, well, another done." The stonebreaker straightened his back with a groan. He had spent five hours on this heap of granite chips. No one ever came down his lonely lane. The August sun streamed down on to the fields and hedges round this forlorn individual. Around his neck was a red, white-spotted handkerchief, fastened with a big rusty safety-pin. A torn and dusty cap adorned his head. Black lines encircled his eyes, and big beads of perspiration which he constantly wiped away with the back of his work-worn and hairy hand stood out on his forehead. He looked in the direction of Porlock Weir, a small hamlet two miles distant. In this village he lived, and had lived for many a year, in a small tumble down cottage with his wife and two children.

The stonebreaker rested on his hammer. He looked into space with a blank gaze, and sighed deeply. How perfect was the day! but how hot! Not a breath of wind stirred the trees or hedges. From somewhere in the distance came the rumble of falling water like far-off music. The stonebreaker was lost in his reverie. He was thinking of things long past and gone, become faint memories: his hopes when he was young, thwarted and dashed. He was sad and yet he was happy, happy as nature all round him seemed to be. Above him a lark sang, making beautiful music to his ears, unrivalled even by the great god Pan. He wondered how many times he had heard the joyous song of the lark. How silent everything was when the bird's song was finished! Into his head floated those words of Wotton's:

"Lord of himself, though not of lands;
And having nothing, yet hath all,"

—which he had learnt at his little school in the village.

Suddenly the stonebreaker emerged from his reverie, back into the life of every day, which was nevertheless sweet to him. He had a peasant's sense of communion with nature, profound yet unexpressive. He lifted his hammer and landed it on to a stone. Tap! It did not break. Tap! tap! tap! thud! It broke. The stonebreaker sighed, and said "Another." Again above, the lark commenced its song.

H. C. Dryden, Form III.

The Travels of Marco Polo.

Marco Polo (1254-1324) has been said to be one of the five great travellers who have seen wonders, and certainly his "Travels" is one of the greatest books of travel ever written, if not the greatest.

When he first set foot in Asia that continent was regarded by Europeans as a "hidden land" overrun by un-

civilised, barbarous Tatars. The monks Carpini and Rubruquis, who travelled some way into Asia about thirty years before Marco did, viewed all they saw with the prejudiced eye of the mediaeval churchman. Marco, on the other hand, was " a young gallant," eager, observant, impartial, and unaccountably learned.

His father and uncle, Venetian merchants, had, in the course of a trading expedition to the Volga, pursued their travels further into Asia and visited the court of the renowned Kublai, Kaan of all the Tatars, who received them hospitably, sending them away impressed by his eagerness to learn more of the Christian West.

The Pope gave Poli two friars instead of the hundred missionaries the Kaan had requested; the brothers set out for Cathay in 1271, with young Marco, aged 17. In Armenia the friars lost courage and returned home.

However the three Venetians traversed Persia (where Marco contracted a fever), entered Bedakshan (where he rid himself of it), and found themselves in eastern Turkestan. For this region Marco Polo's " Travels " was the sole authority until 1860.

On the edge of the Gobi, Marco notices, a substance is fabricated which is impervious to fire—asbestos. He crossed the siren-haunted Gobi, and emerged in Cathay, having learnt from his Turkoman travelling companions much of Tatar history, particularly of " Ung Khán " whom he identifies with " Prester John " the fabled Christian emperor of Mongolia.

Over twenty chapters of his book are devoted by Marco to his hero, Kublai, his court, his life, his manners and habits, his appearance.

The Kaan made his young admirer an imperial commissioner; Marco made notes of what he observed in his travels to China and Burma, which Kublai found highly diverting.

He raised Marco to the governorship of Yang-chow, and sent him on important missions to India and Indo-China.

However, as the Kaan grew older the Poli became apprehensive of their fate when he died, and they sought to return home. They were put in charge of a mission to Persia, carrying a bride to the Khán of the Eastern Tatars.

The voyage went by way of the East Indies, Ceylon, and the coast of southern India, all described by the prolific Marco. He also speaks of Madagascar, Aden, and the African coast, of which he heard from Arab pilots. When the mission reached its destination the Khán was dead, for the voyage lasted two years, 1292-1294, and the lady was married to his son.

As the travellers rode across Persia they heard of Kublai's death. The Kaan's personality is the *leit-motif* of the book. As Masefield says, " One feels the presence of Kublai all through the narrative."

Marco reached Venice in 1295; his extravagant numerical expressions in speaking of Kublai's retinue gave him the nick-name " il Milione." Captured by the Genoese and imprisoned 1298-9, he dictated his book to a fellow-prisoner.

The incredulity of his hearers persisted until the traveller's death, and only long after his time was his " Travels " accepted as a monumental geographical work, as it deserved.

B.P.

Speed Records.

It is difficult to decide where to begin in dealing with speed records. I suppose I should begin with the first cars. The first official record was 15 m.p.h., by a De Dion Bouton in 1903.

The record slowly rose until in 1910 it stood at 103. In 1922 it rose to 140 m.p.h. But as the record rose so cars had to be made safer. This was outstandingly illustrated when Mr. J. G. Parry Thomas crashed at Pendine Sands, Wales. He was travelling at 181 m.p.h. when the right hand rear driving-chain snapped and struck him on the head, killing him instantly. The car swerved in a wide circle and was completely wrecked.

Hitherto record cars had just been ordinary racing-cars, but after securing the world's record at 174.62, Captain Malcolm Campbell completely rebuilt his famous " Bluebird " and on taking it to Daytona Beach, Florida, captured the world's record at 206.95 m.p.h. During the record-breaking run Captain Campbell hit a bump at over 200 m.p.h. and the car jumped 30 yards through the air. At the same time Captain Campbell was nearly thrown out of the car and his goggles slipped down over his face so that he could not see where he was going. All the same he regained control

and broke the record, as he deserved to do. The record he broke was set up by Major (now Sir Henry) Segrave on Ormonde (Daytona) Beach and stood at 203.56 m.p.h.

A few weeks after Campbell's record was broken by Ray Keech driving a "Triplex Special," owned by Mr. J. M. White. The "Triplex" was a freak car, engined by three Liberty aeroplane motors. The car had no streamlined body and the engines behind the drivers were uncovered. Later, this car was smashed to pieces when endeavouring to recapture Segrave's record of 231.44 m.p.h. at Daytona on March 11th, 1929. This record is still unbroken.

P. T KNOTT, Form III.

Cadet Notes.

The following promotions have been made since the last issue of "The Lyonian." July 10th, 1929:—

Corporal Taylor to be Sergeant.
Lance-Corporal Corns to be Corporal.
Lance-Corporal Taylor to be Corporal.
Cadet Assiter to be Lance-Corporal.
Cadet Grout to be Lance-Corporal
Cadet Shaljean to be Lance-Corporal.
Cadet MacIntyre to be Lance-Corporal.

Last term we lost Sergt. Henson, Corpl. Mann, Corpl. Cresswell, Corpl. Garrood, Lance-Corpls. Freeth, Alston, Porter, and Cadet Blessley. However, we have to welcome three recruits: Tipler, Muir, and Russell.

Class firing was held at the end of last term, and two Cadets, namely, Sergt. Henson and Corpl. Mann, obtained marksman's badges. This term we entered for the Battalion Shooting Competition, Junior and Senior. We must congratulate Corpl. Mann and Cadet Yarrow on good shooting in the Senior team. Both these cadets were chosen to fire for the battalion in the Gold Medal Competition.

On Saturday July 13th, the Gurney Shield Contest will be held. May the best Platoon win!

On Saturday, July 7th, a Church Parade was held at St. Mary's Church.

Camp this year will be held at Marlborough on July 27th, but as our Company are providing the Advance Guard, we shall leave Harrow early Friday morning, July 26th. A record number of forty-five are going to camp from our company, and about ten are going in for the certificate "A" examination. We wish them the best of luck. Also, two or three cadets are joining the signallers, and we hope they will be able to qualify as signalling instructors.

J. V. MITCHELL, C.S.-M.

The World's Largest Building.

Construction of the world's largest building has been commenced. This is an announcement which seems to be made with great regularity in the United States, where large and wonderful buildings are erected in rapid succession. Until recently the record was held by the New England building in Boston, but scarcely had this passed the initial stages of construction, when it was announced that a still larger building was to be erected in Chicago.

The new building, which is to have 75 stories, is intended mainly to serve as a market for clothing and apparel manufacturers. Many of the thousands of people who will work in it, will arrive every morning in motor-cars, and a garage capable of accommodating 1024 cars will form part of the building. Transport will be provided for by 68 elevators. The building will contain also two clubs, a first-aid hospital, a gymnasium, a swimming-pool, a hotel with 440 rooms, and even a golf practice course.

Some idea of the immense size of the building may be obtained from the fact that a street or arcade is planned to run through the middle of it. This will resemble an ordinary city street, for on each side of it will be a building three stories high. Above it, however, instead of the sky, there will be the floor of the first of the 72 stories rising from the level of the shops on each side.

The site of the building is on the banks of the Chicago River, and vessels from the great lakes will be able to steam into the river and discharge their cargo in front of the building. In addition there will be a complete railway station situated underground. Below the ground there will be three stories, the lowest of which will contain the machinery necessary for supplying the whole building with light, heat and power.

It will be seen that this building is practically self-contained, and that it may almost be described as a miniature city. This is an interesting feature of most of the large buildings now being built in America.

Swimming Sports.

The Swimming Sports were held on Monday afternoon, July 1st, at the Harrow Baths. The weather was fine but rather cold, and for this reason it was decided to postpone the distribution of the medals until the following morning. However, there was a fair number of parents present.

The swimming, on the whole, was good, Barwick again winning the senior championship. In the junior contests, F. Barnard distinguished himself with some excellent performances, and he was easily the best junior. Other good performances were those of W. T. Barnard in the senior long plunge, of Hunt in the senior running and high dives, and of Crow in the two lengths senior.

The results were as follows :—

One Length, Junior.—1, F. Barnard ; 2, J. W. Clark ; 3, Langley. Time, 63secs.

One Length, Senior.—1, Pirouet ; 2, Barwick ; 3, Hoadley. Time, 51 2-5secs.

Long Plunge, Junior.—1, F. Barnard ; 2, Langley ; 3, Grant. Length, 33ft. 2ins.

Two Lengths, Senior.—1, Crow ; 2, Pirouet ; 3, Barwick. Time, 1 min. 59secs.

Two Lengths, Junior.—1, F. Barnard ; 2, Bruce ; 3, Langley. Time, 2mins. 27 4-5secs.

Long Plunge, Senior —1, W. T. Barnard ; 2, Henson ; 3, Brown. Length, 34ft.

Three Widths.—1, Barwick ; 2, F. Barnard ; 3, Finch. Time, 1 min. 16secs.

Beginners' Race.—1, Oliver ; 2, Saunders.

Four Lengths, Junior and Senior.—1, Barwick ; 2, F. Barnard ; 3, W. T. Barnard. Time, 4mins 49 1-5secs.

Senior Running Dive.—1, Hunt ; 2, Barwick.

Junior Standing Dive.—1, F. Barnard ; 2, Grant ; 3, J. W. Clark.

Senior High Dive.—1, Hunt ; 2, Barwick ; 3, W. T. Barnard.

Inter-House Relay Race.—1, North ; 2, South ; 3, East.

D. P. G.

House Notes.

SOUTH HOUSE.

Congratulations to A. Grout on being made a Pro-Monitor and also on being promoted to the rank of Lance-Corpl. ; also to D. Goldhawk and A. Grimes on receiving their 1st XI. Cricket Colours ; and to Hocking, Hockley, Flint, Hunt and Henson, on receiving their 2nd XI. Cricket Colours.

In the Athletic Sports this year we did not do nearly so well as last year, and only came out second in the House List. In the Tug-of-War our Seniors did very well to win.

We also came second in the Swimming Sports, although we were not a very good one. C. Hunt did very well to win the High and Running Dives.

Up to date we have only played one House Match, that being against North. After a very close game we managed to get North all out about ten minutes before stumps were to be drawn. The notable feature of the game was a faultless century by A. Holland.

This term the House Platoon has been working hard in preparation for the Gurney Shield Competition, which the whole House hopes they will be able to win for the second time in succession.

J. C. O. Hurst, Capt.

EAST HOUSE.

Congratulations to P. J. Markham and to J. V Mitchell on being made Monitors, and to MacIntyre on his promotion to the rank of Lance-Corpl. in the Corps ; also to P. J. Markham on receiving his 2nd XI. Colours.

As regards the Athletic and Swimming Sports, I am afraid we gave rather a poor account of ourselves, although special mention must be made of Pirouet in the Swimming Sports, who swam very well. However, we hope for a better result next year, and remember it is up to you younger fellows to obtain for East that coverted honour of Cock House.

This term the Gurney Shield Competition will be held, and we hope we shall be successful. Recruiting has been very slack this term, for we have only had two recruits, namely, Muir and Russell. Join up East House ! and make sure we are the biggest platoon next term.

Although we had to field rather a young team in the House Match against West, we did fairly well, through the useful batting of Markham. May we do better still in the other two matches.

We are sorry to have lost, last term, L. D. McDonald, R. H. Masters, S. R. F. Porter and H. M. Purchase. We wish them every possible success.

J. V. Mitchell, Capt.

WEST HOUSE.

We must congratulate all those of West House who did so well in the School Athletic Sports. Especially do we congratulate Shaljean on beating the School record for the Long Jump, though he was beaten by Hurst and Swan. In the Swimming Sports West did not do well, and we hope that next year more boys will take an interest in this event and so help their House. At cricket we have played only one game against East; this resulted in an easy win for West.

We are also very pleased with the improvement in the drill of West House Platoon, and hope that, if not becoming No. 1 Platoon, we shall at least rise above the fourth place.

J. B. M. SWAN, Capt.

NORTH HOUSE.

This year we have to congratulate ourselves on our fine performances in the Swimming and Athletic Sports. In the Athletic Sports we were top with a margin of 153 over South, the runners up. This success was largely due to Brooks, who won the Junior Challenge Cup, and "Nobby" Clark.

In the Swimming Sports, North House were again Champion House. We wish to congratulate Barwick and F. Barnard on winning the Senior and Junior Challenge Cups respectively.

In Cricket we have made rapid progress this year, Davies, E. Corns and Day receiving their second eleven colours.

We are glad to see that Assiter has been awarded his stripe in the Corps. Lastly—the best of luck to our House Platoon in the Gurney Shield Competition!

D. W. COOMBES, Capt.

The School Sports.

RECORDS BEATEN.

The annual athletic sports of the Lower School of John Lyon were held on Saturday, June 15th, on the Harrow School running track in the presence of a large number of parents, Old Boys and friends. Although the sky was overcast, the rain held off and a long and interesting programme was well carried through. There was keen competition in each event and there were several close and exciting finishes, the best, perhaps being in the mile race for Old Boys, in which G. Thomas, the winner, and I. Luckin (second) were separated by inches at the tape. With the exception of the long jump no

school records were disturbed, although in the 100 yards over 16, Hurst equalled the record of 11 seconds. Hurst, who secured the senior championship cup, was an outstanding competitor, and he easily broke the long jump record of 17 feet 6 inches, with a leap of 18 feet 5½ inches. A. M. Swan lowered the Old Boys' 440 yards record of 55 4-5th secs., made by W. E. Lloyd in 1906, winning the race in 54 4-5th secs. Although the mile record for the Old Boys was not shown on the programme it was stated that G. Thomas' time of 4 min. 57 1-5th secs. constituted a record for the race. Brooks did exceedingly well to gain the junior championship cup with 96 points, and North House recorded a popular victory in winning the house championship.

The results were as follow:—

100 Yards Handicap.—Under 12: Wingfield 1, Banting 2, Pratt 3; time 14 3-5th secs. 12-13 years: Johnson 1, Heady 2, Oliver 3; time 13 3-5th secs. 13-14 years: Brooks 1, Brewin 2, Siggers 3; time 12 2-5th secs. 14-15 years: Willies 1, Brown 2, Dryden 3; time 11 4-5th secs. 15-16 years: Shaljean 1, Davies 2, Hoult 3; time 11 2-5th secs. Over 16: Hurst 1, Swan 2, Wingfield 3; time 11 secs. Old Boys; A. M. Swan 1, W. Pountney 2, R. T. Edwards 3; time 10 4-5th secs.

200 Yards.—Junior: Brooks 1, Siggers 2, Carew 3; time 25 3-5th secs. Senior: Shaljean 1, Hurst 2, Swan 3; time 22 3-5th secs.

440 Yards.—Old Boys: A. M. Swan 1, A. Clarke 2, R. T. Edwards 3; time 54 4-5th secs. Handicap, Junior: Brooks 1, Wingfield 2, T. Corns 3, Wheatley 4; time 66 4-5th secs. Senior: Wingfield 1, Coombes 2, Grimes 3, Swan 4; time 57 4-5th secs.

120 Yards Hurdles.—Junior; Brooks 1, Wilson 2, Clark 3; time 23 4-5th secs. Senior: Shaljean and Hurst (tie) 1, J. Clark 3; time 19 2-5th secs.

Throwing the Cricket Ball.—Senior: Swan 1, Hurst 2, Coombes 3; distance 83yds. 2ft. Junior: Langley 1, Grant 2, Debenham 3; distance 62yds. 5ins. Old Boys: A. M. Swan 1, W. E. Sorrell 2; distance 88yds. 2½ins.

One Mile Handicap.—D. Wingfield 1, Sinclair 2, H. Wingfield 3, J. W. Clark 4, Briggs 5; time 5 mins. 5½ secs. Old Boys: G. Thomas 1, I. Luckin 2, G Exell 3, A. Clarke 4; time 4 mins. 57 1-5th secs.

Long Jump.—Junior: Brewin 1, Grant 2, Heady 3; distance 14ft. 1½ins. Senior: Hurst 1, Swan 2, Shaljean 3; distance 18ft. 5½ins.

High Jump.—Junior: Clark 1, Siggers 2, Grant and Bergl (tie) 3; height 3ft. 11½ins. Senior: Swan 1, Hurst 2, Gillett 3; height 5ft. 1in.

Inter-House Relay.—Junior: North 1, South 2. Senior: North 1, West 2. Old Boys: West 1, North 2.

Tug-of-War.—Junior: North. Senior: South.

Sisters' Race.—Under 11: Miss Markham 1, Miss Crisp 2. Over 11: Miss Winckles 1, Miss Corns 2.

Open events, decided before the day:—

100 Yards.—Senior: Hurst 1, Clark 2, Shaljean 3; time 11 secs. Junior: Brooks 1, Grant 2, Corns 3; time 12 4-5th secs.

200 Yards.—Senior: Clark 1, Hurst 2, Wingfield 3; time 24 1-5th secs. Junior: Brooks 1, Bergl 2, Eade 3; time 28 4-5th secs.

440 Yards.—Senior: Grimes 1, Wingfield 2, H. Taylor 3, Swan 4; time 61 3-5th secs. Junior: Brooks 1, Clark 2, Brewin 3, Corns 4; time 69 4-5th secs.

One Mile—Senior: Sinclair 1, H. Taylor 2, Mitchell 3, E. Corns, 4, Fitt, 5; time 5 mins. 37 1-5th secs. Junior: Clark 1, Wingfield 2, Briggs 3, Oliver 4, Corns 5; time 6 mins. 17 1-5th secs.

Senior Championship Cup.—Hurst.
Junior Championship Cup.—Brooks.
Champion House.—North.
High Jump Cup, presented by Mr. E. L. Sorrell.—Swan.
H. P. Sholl Cup, for cadet obtaining highest number of points.—Hurst.

The Prizegiving.

Mrs. C. E. Goddard, who was accompanied by Dr. C. E. Goddard, a governor of the school, gracefully presented the prizes.

Mr. O. A. Le Beau, the headmaster, welcomed the parents and visitors, and said the day had been a record one, both as regards attendance and interest. He was specially pleased to see a large number of Old Boys of the School present and competing in the events.

Dr. C. E. Goddard in acknowledging the thanks and cheers accorded Mrs. Goddard paid a warm tribute to the efforts of the staff and officials. They would all be interested to learn that they were in sight of the much needed extension to the school. The plans had to be approved and they were now waiting for the money. He had no doubt that the money would be found very soon (applause).

Mr. Le Beau, at the conclusion, thanked Dr. Cyril Norwood, the headmaster of Harrow School, for the loan of the track for that meeting and for training purposes. Mr. Housden and Mr. Marchant for their assistance in training and refereeing; and Mr. W. Wilson for his efforts as hon. secretary.

The Officials.

The efforts of the officials led to the events being carried through efficiently and without delay. They were:

Mr. O. A. Le Beau, President; Mr. E. F. Housden, referee; Mr. E. Ll. Thomas, Mr. B. T. Osborne, Mr. D. A. Cowtan, Mr. J. A. Murray, judges; Mr. W. Wilson, starter; Mr. W. W. Ewbank, timekeeper; Mr. S. Kearsey, competitors' steward; Mr. P. Bishop, Mr. A. Moppett, telegraph; Messrs. E. C. Barwick, D. P. Goldhawk, A. H. Grout, H. J. Fish, recorders; Messrs. C. M. A. Baker, V. Blackman, A. W. Brooks, W. E. Collins, G. G. Corder, G. L. Hall, R. H. Hall, I. J. Johnson, W. R. Osborne, R. J. Prosser, A. C. Rogers, J. H. Startin, W. L. Todd, general stewards; Mr. W. Wilson, clerk of the course and hon. secretary.

Cricket.

At the beginning of the season the 1st XI prospects did not look very cheery. Of last year's eleven only three colours remained, J. Swan, G. Woodbridge, and J. C. O. Hurst; a natural result was that in the earlier games, before the eleven had settled down, they suffered several reverses. Then A. C. Grimes and D. P. Goldhawk improved wonderfully, and were in due course awarded their colours. Next to come into note were G. Davies with his bright innings against the County School and D. Coombes for his spirited hitting and quick fielding in the slips. Then Holland improved with his fast bowling, and Gillett had some inspired spells of bowling. Thus gradually the team improved and won several games against really strong sides; especially noteworthy were their victories over Harrow Town and Old Lyonians. The enthusiasm shown in the field is very fine to watch and has led to some smart run-out decisions. All round the season has been a very successful one, as the records below will show. The team has been as follows: J. B. M. Swan (Capt.), G. C. Woodbridge, J. C. O. Hurst, A. C. Grimes, D. P. Goldhawk, G. C. Davies, D. W. Coombes, R. Fitt, R. Gillett, A. C. Holland, R. Hocking; H. Hockley and P. J. Markham have also played in several games.

FIRST ELEVEN GAMES.

SCHOOL v. BATTERSEA GRAMMAR SCHOOL.

Result; Lost by 36.

In a low scoring game the School, batting first, were dismissed for the poor total of 31 runs. Battersea Grammar did little better, however, and were all out for 67.

SCHOOL.

Bowling: Coombes 3 for 22, J. Swan 3 for 45.

SCHOOL v. BRONDESBURY COLLEGE.

Result: Won by 88 runs.

The match, played away, was too one-sided to be an enjoyable game. After the School had declared at 96 for 7, of which Grimes scored 25 and Hurst 21, Brondesbury were all dismissed for 8, Woodbridge taking 8 for 2 and Gillett 2 for 5.

SCHOOL v. JOHN LYON ASSOCIATION.

Result: Lost by 25 runs.

Played on Whit-Monday, on the School Ground, the Association, batting first, scored 142; D. Woosley 41, C. Rose 33 and N. Goldhawk 21. The School replied with 117, Grimes, Woodbridge and Coombes all batting well; for the Association A. Swan took 4 for 34 and Bell 3 for 14. J. Swan bowled extremely well for the School, taking 8 for 54.

Bowling: Holland 5 for 33, Hocking 2 for 1, Hurst 2 for 25.

SCHOOL v. HARROW COUNTY SCHOOL.

Result: Won by 2 wickets and 36 runs.

In spite of the absence of J. Swan and Gillett the School handsomely defeated their local rivals. The County batted first and were all out for 65. Woodbridge took 5 for 25, Holland 4 for 24, bowling unchanged. The School passed this total with five wickets down, mainly owing to some stubborn batting by Goldhawk and a good innings by Davies.

Bowling: Woodbridge 4 for 21, J. Swan 4 for 37, Gillett 2 for 12.

SCHOOL v. HARROW TOWN.

Result: Won by 8 runs.

This game, one of the best of the season, played at Rayner's Lane, was won by the School in a very exciting finish, Woodridge making a good catch at point when only a few more runs were needed to pass the School's score. The School batted first, scoring 123, all the side batting well. Harrow Town replied with 115.

SCHOOL v. A. SWAN'S XI.

Result: Draw.

As the School's fixture for Wednesday, June 19th, had fallen through. A. Swan got together a fairly strong side to give the School a game. Batting first, A. Swan's XI, scored 201 for 8 declared, Mr. Goldhawk by bright forcing cricket, scoring 69, D. Woosley 30 and N. Goldhawk 26. For the School J. Swan scored 100 not out, batting well, although the last twenty runs were rather a long time coming.

Bowling: Woodbridge 3 for 49, J. Swan 3 for 72, Coombes 1 for 1, Gillett 1 for 16.

SCHOOL v. UXBRIDGE COUNTY SCHOOL.

Result: Lost by 4 wickets and 31 runs.

In this game played at Uxbridge, on June 22nd, the School went in to bat on a very bad wicket and were dismissed for 71, most of the batsmen being caught in "slips." Uxbridge, knowing the pitch, would not touch a single off ball and ran up 102 for 6 wickets.

Uxbridge County School: 102 for 6 wickets.

SCHOOL v. OLD LYONIANS.

Result: Won by 16 runs.

Playing on the School Pitch the School defeated a strong team of Old Lyonians. Good batting by the School's opening batsmen gradually raised the score, which was finally 145 for 4 and 163 for 6 wickets declared. The Old Lyonians replied with 147, chiefly owing to good batting by Merrifield and Kitton.

SCHOOL v. HARROW C.C. 3rd XI.

Result: Won by 10 wickets.

In this return game with Harrow C.C. on Monday and Tuesday evenings, July 1st and 2nd, the School completely reversed the previous result. Batting first on Monday, Harrow C.C. were dismissed for 77. The School bowling was good and was aided by some smart and clean fielding. On Tuesday evening J. Swan and Goldhawk scored 111 without being separated before rain caused adjournment. Goldhawk batted really well in what was undoubtedly his best innings of this season.

SCHOOL v. ROYAL MASONIC SCHOOL 2nd XI.

Result: Won by 132 runs.

The School opened well, scoring 67 before the 2nd wicket fell. Grimes and Coombes then added 96. Coombes put plenty of power into his strokes, making 13 fours and one six in his 66. Grimes, too, batted very steadily. The School then declared at 203 for 3 wickets, and dismissed Royal Masonic, just on time, for 71. Gillett bowled extremely well, taking 7 for 23.

SCHOOL v. TRINITY PRESBYTERIAN CHURCH C.C.

Result: Draw.

There was quite a riot of runs in this game. Batting first on Thursday, evening July 4th, the Church team scored 303 in $2\frac{1}{4}$ hours. The big feature of the innings was a century by P. Bluett, of Harrow Town; missed once or twice from lofted hits, he went on to score 123 in 1 hour 10 mins.; he and A. Swan added 151 in one hour. On Friday night the School batted extraordinarily well against a strong bowling side which included Harrow Town's three opening bowlers. In the end they forced a very creditable draw, in which result Goldhawk, Grimes, Woodbridge and Hurst played a prominent part.

21	11	6	3	1 no result.

SECOND ELEVEN.

The second eleven, considering that it has been deprived of the services of several of its most prominent members, owing to calls from the first eleven, has had an exceptionally good season. The team has played well throughout the term and has improved enormously ; some excellent performances being given both with the bat and ball, and in the field. Hockley, Porter, Markham, E. Corns, Flint, Henson, Hunt and Day, have all received their second eleven colours, while the following have also assisted us :—Coles, Finch, Fish, Hamilton, H. Taylor, O. Taylor, W. T. Barnard and Sullivan.

Record up to July 10th (inclusive) is :

	Played.	Won.	Lost.	Drawn.
Home ...	4	4	0	0
Away ...	6	5	1	0
Total ...	10	9	1	0
